

# Simplifying Vendor Access Control Whitepaper

The modern business ecosystem thrives on collaboration. Third-party vendors play a crucial role, from managing IT infrastructure to delivering marketing campaigns. Yet, ensuring secure access for these external partners often leads to a complex and time-consuming process: Vendor Access Control (VAC). This whitepaper explores the challenges of traditional VAC methods and presents a game-changing solution: a streamlined approach built on automation and role-based access control (RBAC).

## The Burden of Traditional VAC

### Manual Onboarding

Lengthy processes involving paper forms, password resets, and disparate systems create bottlenecks and frustrate vendors. A study by CareerBuilder found that 37% HR professionals experience heavier workloads, and 28% of them lost important paperwork due to manual onboarding procedures.

### Inconsistent Access

Static user accounts with broad permissions pose a significant security risk. The Data Breach Investigations report by Verizon revealed that 74% of breaches involve a human element, largely driven by privileged access misuse and stolen credentials.

### Limited Visibility

Lack of centralized control makes it difficult to track vendor activity, hindering compliance efforts and incident response.

## Introducing Yali – the Game Changer in Vendor Access Control

Yali is an Identity and Access Management (IAM) solution that empowers organizations to revolutionize their VAC approach with:

### Effortless Onboarding

Extend the existing IAM policies to external vendors. Pre-defined workflows automate account creation, permission assignment, and Single Sign-On (SSO) access, reducing onboarding time from weeks to seconds.

### Customized Access Levels

Create granular, role-based access controls tailored to each vendor's specific needs. Grant precise permissions to specific systems and resources with attribute based access control. This minimizes the attack surface and enables the principle of least privilege.

### Automated Monitoring

Gain real-time visibility into vendor activity across the IT infrastructure. Track access logs, identify suspicious behavior, and receive automated alerts for potential security breaches. Pre-built reports ensure business leaders stay audit-ready at all times.

## Organizational Benefits in Numbers

With Yali's powerful access controls, here is what organizations can achieve:

### Reduce Onboarding Time by 90%

Automate manual processes and free up IT resources for more strategic initiatives.

### **Minimize Security Risks by 75%**

Eliminate over-privileged accounts and enforce granular access controls.

### **Improve Vendor Satisfaction by 80%**

Offer a seamless and efficient onboarding experience, fostering positive vendor relationships.

## **Ready to Simplify Vendor Access Control?**

By implementing a modern IAM solution with simplified VAC capabilities, organizations can achieve a win-win situation. They can strengthen the security posture, streamline vendor onboarding, and collaborate more effectively with external partners.
